

65310-2007-843 Middle Fork Sheep Creep CRCT Restoration

State(s): Utah

Managing Agency/Organization: Utah Division of Wildlife Resources

Type of Organization: State Government

Project Status: Completed

Project type: Community Project

Project action(s): Watershed, Introduced species, Genetic diversity

Trout species benefitted: Bonneville Cutthroat, Colorado River Cutthroat

Problem: Non-native salmonids have been a major cause of decline of Colorado River Cutthroat Trout across their native range.

Objective: The objective of this project is to remove non-native salmonids from 10 miles of stream and 170 surface acres of standing water in the middle Fork of Sheep Creek drainage through a chemical renovation. This is Phase 1 of a multi-year renovation project.

Objectives:

- The objective of this project is to remove non-native salmonids from 10 miles of stream and 170 surface acres of standing water in the middle Fork of Sheep Creek drainage through a chemical renovation. This is Phase 1 of a multi-year renovation project

Partners:

- Utah DNR, US Forest Service

Project cost: \$145,745.00

Start Date: 07/01/2012 **Completion Date:** 10/30/2013
